

Azienda Agricola Gini

The estate is certified organic.

The vines are not “forced” in order to maintain a low production and the natural cycles are respected (for example vines are pruned according to the moon phases).

Copper and sulphur base products are utilised. No insecticides are used. Only manure is used as fertilizer. Spontaneous cover crops (grass cover) are left between the rows of vines, the grass cover is mowed and the turf is left in place (the soil is not tilled).
